Claims 47-75 are presented for examination.

Applicants' amendment filed January 21, 2004 has been received and entered.

Accordingly, the rejection made under 35 USC 101, double patenting, as set forth in the previous Office action at pages 2-4 is hereby withdrawn.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 47-75 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 20-35 of U.S. Patent No. 5,807,858.

Although the conflicting claims are not identical, they are not patentably distinct from each other because as stated in the applicants' response dated January 21, 2004 that the present application claim 47 and claim 20 of the patented application reveals that claim 20 recites a species of the broad claim 47 of the present application. Obviously, one skilled in the art would have assumed the present application broad genus of non-polypeptide  $\alpha$  receptor activating agent would possess the same activity as the specific species of claim 20 of the

Art Unit: 1614

patented application, thus one skilled in the art would have been motivated to use or substituted any non-polypeptide ~~α~~receptor activating agent and achieve the same results in the absence of evidence to the contrary.

Claims 47-75 are not allowed.
